

Deep Infinity

The Flow of Reality is
Constant, with the Continual
Emergence of New Realities,
Inherently Incomplete, Deeper and
Deeper Inside Infinity

Flow is the Shepherd of Reality,
the Movement of Experience, the
Iteration of Normalcy, the Change
with Restraint

Emergence is the Violence of
Reality, the Destruction of
Experience, the Elevation of the
Exceptional, the Change That
Dominates

Infinity is the Connectedness of
Reality, the Endlessness of
Experience, the Coexistence of
Darkness and Light, the Context
of All Change

Philosophers throughout time have taken on the difficult task of defining the world and humanity's role within it. Through art, religion, and science, they have strained to quench the thirst for certainty and understanding. The philosophies they have developed, while entertaining or useful in some way, are premised on the desire to use information to explain the world.

There is one underlying problem haunting these efforts, the problem of infinity. The core issue that cannot be solved is that infinity exists, and trying to explain it is the highest of intellectual errors. Attempting to obtain knowledge from information is inherently misguided because everything in reality is inherently information. This is the infinity problem, the inability to finitely define everything. The great uncertainty of knowledge is a feature of reality that demands acceptance and not explanation.

General philosophies attempt to explain and infer truth, tending to avoid recognition of the infinity problem. The declaration of this philosophy is a surrender to infinity and a recognition of its completeness. An admission that there is a world of observation without full explanation. Therein lies the beauty in infinity.

Infinity is the deepest idea. The idea that something is boundless, completely connected, and perfectly whole. To this day, many of the issues presented by the infinity problem confound those trying to perfectly explain the world. Rather than appropriately adapting mathematics or science to accept infinity, there is an endless effort to evade it. There are methods for pursuing the desires of learning that do not commit the fatal conceit that infinity can be conquered.

Primarily a reiteration of the concept of infinity, Deep Infinity extends this idea into a non-falsifiable philosophical framework. This is done primarily through producing a more refined view of the phenomenon of emergence. The charm of emergence is that it is a method for explaining the world that is entirely compatible with and accommodative of the infinity problem. Emergence, while studied widely, has lacked a larger integration into philosophical thought. That is what the Deep Infinity philosophy is about.

Emergence is a refined view of logic and observation. In opposition to the typical analysis of reality by categorization, emergence states that observations "emerge" spontaneously from interactions among reality. The interaction of the parts of reality is the substance of observation, and not the individual parts in and of themselves. There are an infinite number of parts and an infinite number of observational possibilities. Emergence is conceptually elegant because it does not commit the fatal error of trying to attribute a divisive nature to information.

Emergence is the vision into infinity. Emergent phenomena do not require explanation; their explanation is itself infinity. There are interactions that occur that are complete in and of themselves, without the necessity of explanation. The stream of emergence is endless and provides an unlimited view into reality. Emergence is a window into the infinite without division.

Some useful tenants that are derived from the integration of these concepts and distinct from most other philosophies are as follows:

- Reality is Infinitely Inseparable
- Emergence is the Appearance of Information
- Error Always Accompanies Theoretical Knowledge
- Reduction and Abstraction are the Introduction of Error
- Causation is an Illusion as Causation Presumes Division

Attempting to prescribe certainty or truth to reality is inherently flawed, except in infinity itself. All other descriptions offer a flawed perspective on information.

Emergence is a more compatible way of dealing with infinity than other philosophical approaches because it does not attempt to perfectly explain information. Emergence expresses an observation as is outside of a complex theoretical framework. It is not falsifiable that emergence occurs; however, theoretical explanations of information can be falsified.

Integrating emergence with infinity creates a duality that is the essence of operating in the world. Deep Infinity defines this duality as **Flow** and **Emergence**. **Flow** is the observation of emerged phenomena. **Emergence** is the observation of newly emerging phenomena. Flow is a recognition that we do operate on knowledge, and emergence is a recognition that knowledge is incomplete and may be in error.

This duality provides a very deep way of analyzing infinity. Flow is the apparition of consistency, of cause and effect, and of the ability to interact in known ways with the world. Emergence is the appearance of something new, interrupting consistency, disturbing the common interaction with the world.

Flow and emergence provide a framework of useful operation in the world, with a recognition that there is completeness in infinity but a lack of completeness operating inside it. Living both in the regularity of time and in the expectation of surprise.

Flow into Emergence

The Life Strategy of Duality

Even with perfect understanding of the infinity problem, it is not obvious how to adapt to it in the real world. There is a temptation to abandon even the most basic pursuits because there is ultimately no guarantee that a predictable outcome will be reached. While it is true that certainty does not exist, with appropriate techniques this uncertainty can now be harnessed to produce an even greater result than what was originally expected. The flow into emergence strategy is the life framework for operating in harmony with the infinity problem.

The strategy is actually very simple to understand using the concepts of flow and emergence. For every goal one should implement a dual strategy of flow and emergence. The flow strategy provides the stability that life craves, and emergence prepares us for its inevitable chaos.

The flow strategy involves consistently executing the regular tasks of life. Taking the most reliable observations of nature (not man) and using them to maximum benefit is the basis for action. Flow demands minimizing distraction and maximizing focus. Constant experimentation and increased experience leads to learning and improvement. The product of flow is a stream of value that accumulates into abundance.

The emergence strategy involves the inhalation of the irregular. Emergence takes flow and converts it into a powerful weapon for fighting uncertainty. Redundancies, safety mechanisms, and other fortresses against disaster are erected from flow's abundance. A bounty is acquired from transforming the lessons of flow into extreme beauty in the world.

Use Mother Nature's Massive Experience as Your Guide

Execute Consistently to Gain Maximum Value from Normalcy

Continuously Experiment Where the Costs are Small

Generate Productivity in the Present with Minimal Reliance on the Future

Use Contrarian Action to Benefit from the Normal Cycles of Nature

Prepare for Mother Nature's Most Reliable Patterns to Go Astray

Be Prepared for the Abnormal and Profit from It

Look for Huge Opportunities from the Flow of Small Experiments

Build Redundancies, Safety Mechanisms, and Savings to Survive

Understand the Meta-trend and the Cycle of Cycles

The Story of the Blue Swan

The swan is nature's most powerful symbol. It is the symbol of elegance and purity. It protects peace with vigilance and maintains serenity with diligence . The swan is a violent lover seeking to unify God and life. In form and in action, the swan epitomizes strength and beauty. Ultimately, it exists as the symbol of all understanding.

The Greeks revered the swan as a protector of their Gods and the divine guide of their chariots. In Hinduism, the swan is cherished for its ability to be part of the world but not stained by it, the embodiment of peace and acceptance. However, the swan has introduced a great darkness into the consciousness of mankind.

Long ago, the Roman poet Juvenal reflected on the white swan and its uniqueness in the world. He even remarked on the absurdity of the existence of a black swan in reality, as it would be at odds with the purity that the swan gracefully exhibits. A black swan would surely conflict with nature's plan and humanity's experience of its great creation.

The term "Black Swan" became nomenclature for describing something that could not be possible. The phrase caught on in sixteenth century London for those exhibiting certainty about what did not exist in reality. That is until 1697 when a real black swan was discovered in Australia. The myth of the Black Swan had become a reality and a blow was dealt to the desire for perfect understanding in the world.

After this discovery, the Black Swan came to represent the dark and unexpected. The concept reflected on humanity's inability to cope with uncertainty and to predict extreme events. The modern philosopher Nassim Taleb has reintroduced and improved the conception of this Black Swan problem and its implications for the structure of knowledge.

The Deep Infinity philosophy embraces the duality of the swan, as the swan is the ideal representative of reality. The swan represents the beauty of the expected and the exaltation of the unexpected. Duality of life in its character and in its color. It is the flow of life and the violence emerging from the passion of reality.

While the black swan has been discovered, a blue swan has yet to be found. It is currently considered impossible to conceive of the discovery of yet another swan of yet another color. The discovery of a blue swan, while surprising, would be much different than that of the black swan. Unlike the black color associated with darkness the Blue Swan would be representative of peace, wisdom, and intellect just as the color.

This is the same sense of being that the Deep Infinity philosophy aims to bring to its adherents. Those intrigued by Deep Infinity strive to become a Blue Swan amongst the White Swans and Black Swans around them. A Blue Swan consuming the White Swan's flow of elegance and converting the Black Swan's dark emergence into the blue vibrance of infinity.

7

Commandments of the Blue Swan

Embrace the Perfection of Reality

Search for the Unseen

Prepare for the Absurd

Predict the Exception

Avoid the Noise of Sensational Normalcy

Plan Multiple Paths for Every Destination

Try Small, Fail Small, Learn Large

The

END

Is Infinite
